

Success Stories | Zagis USA

ZAGIS USA IS A LOUISIANA CORPORATION

headquartered in Lafayette, LA. Zagis opened its first facility, a 160,000 square foot cotton spinning mill, in late 2009 and has plans to open additional Louisiana facilities in the coming years.

Provation Technologies began work with the company before the spinning mill opened and helped develop and deploy an internal IT network for their corporate office and an IT infrastructure for the Zagis spinning mill facility in Lacassine, LA. This facility proved to be a unique project as there were special concerns

Zagis USA has invested over \$75 million into creating new cotton-spinning mills in Louisiana, including this plant in Lacassine. The 160,000 sq. ft. factory will spin cotton into about 50 million pounds of yarn a year.

surrounding the often sensitive IT equipment and the less than ideal spinning mill environment. Not only is the spinning mill often a hot environment, but the mill also has a high level of fiber particles that fill the air. Provation developed a solution that would allow for the security and safety of the IT equipment as well as a unique equipment rack that would filter the air entering and exiting the rack. Because the plant operates 24 hours a day, 7 days a week, it was crucial that their IT systems were reliable and equipped to handle the non-stop workflow.

Zagis also had unique needs regarding connectivity between their corporate office and the facility in Lacassine, LA. As communication between the plant and the corporate office was a high priority,

Provation worked with regional service providers to develop a reliable point-to-point connectivity solution allowing clear and consistent communication and information transfer between information systems in Lafayette and the Lacassine facility.

Zagis USA takes advantage of many of Provation's service offerings including: Consulting Services, Backup Solutions, Infrastructure Services, and Voice over IP Telephony solutions to name a few.
